Nombres: Quishpe Jhonatan – Sanchez Andres

Thevenin

Rth apagamos las fuentes

$$Req1 = \frac{560x4700}{5200} = 500.38$$

$$Req2 = \frac{500.38x330}{830.38} = 198.85$$

Rth =
$$\frac{298.85}{\Omega}$$

Voltaje Thevenin (Vth)

M1

M2

5260 I1-4700 I2 =12 ecuacion 1

-4700 I1 +5030 I2 = 2 ecuacion 2

I1 = 15.97 mA

I2 = 15.32 mA

 $VTh = 330 \times i2 = 5.05 V$

Circuito equivalente Thevenin

Aplicamos divisor de voltaje

$$VR5 = \frac{1000}{298.85 + 1000} x 5.05 = 3.88 \text{ V}$$

Corriente en R5

IR5 =
$$\frac{5.05}{298.85 + 1000}$$
 = 0.003888 A \rightarrow 3.88 mA

Con el circuito original

M1)

M2)

$$-2+330(12-13)+4700(12-11)=0$$

M3)

$$1100I3 + 330(I3 - I2) = 0$$

$$-33012+143013 = 0$$
 (3)

I1=17.35 mA

I2=16.87 mA

13=3.89 mA

$$IR5 = R3 = 3.89 \text{ mA}$$
